Try Fdisk /mbr on it.

Drive letter did not change. I was trying to make sure it stayed the same. When I ghosted to the new drive I wasn't sure if the drive letter would come with it. I wanted it to stay as C:.

It is C: but still will not complete the boot.

I tried moving the disk between the two controllers and the same thing occurs. I tried using disk manager to force the disk letter to C: (what it originally was for the Win2K boot). Still no dice.

Are you saying that the drive letter was changed? Seems to me that doesn't yield an 0x7b error. Anyhow, from the Windows XP installation edit the Windows 2000 registry: <http://support.microsoft.com/kb/223188/>

You can also try the Windows 98 fdisk /mbr command on the non booting drive.

John
