Hi!!

I have 2 SCSI disk.

One of them, with de S.O. (Windows 200 SP4) and another disk with shared user folders.

I need to change the user folder disk because is full, but I like to backup the permission of this folders to restore it in the new disk.

Do you know some script o software to backup the user permission and restore them in a new (cloned) disk with the same directory structure?

Thank you.

Guille
