At the beginning of the installation process you have to press F6 when prompted and supply the controller drivers on a floppy diskette. Pay close attention to the messages at the bottom of the screen when the setup begins and you will see a prompt instructing you to press F6 to install RAID/SCSI drivers.

Hi,

I want to install win2k server on a ACER altos G610 with AIC-7899 SCSI controller but the win2k installation process doesn't see it and then can't detect HD. How can I make Win2k setup to see hard drives?

Thanks in advance.
