At last I can see the posting.

Quote:- "To extract the service pack files without installing them, execute

J:\W2kSP4\W2KSP4.exe /x

Then when prompted, specify a directory to hold the extracted files.

.....unquote

I don't quite understand and how to go about it. (Prior to the problem in booting, my win2k is sp4 updated regularly through WindowsUpdate.) "Dave Patrick" wrote:

You can replace the file from the recovery console. From a command prompt you can expand the file. An example;

```
expand E:\I386\l_intl.nl_ %windir%\system32\l_intl.nls
```

would expand a new copy to the \system32 directory.

Also you'll want to use the correct version for the service pack level you're at. So you may need to extract the file from a service pack.

To extract the service pack files without installing them, execute

```
J:\W2kSP4\W2KSP4.exe /x
```

Then when prompted, specify a directory to hold the extracted files.

To start the Recovery Console, start the computer from the Windows 2000 Setup CD or the Windows 2000 Setup floppy disks. If you do not have Setup floppy disks and your computer cannot start from the Windows 2000 Setup CD, use another Windows 2000-based computer to create the Setup floppy disks. At the "Welcome to Setup" screen. Press F10 or R to repair a Windows 2000 installation, and then press C to use the Recovery Console. The Recovery Console then prompts you for the administrator password. If you do not have the correct password, Recovery Console does not allow access to the computer. If an incorrect password is entered three times, the Recovery Console quits and restarts the computer. Note If the registry is corrupted or missing or no valid installations are found, the Recovery Console starts in the root of the startup volume without requiring a password. You cannot

Re: \winnt\system32\l_intl.nls

access any folders, but you can carry out commands such as chkdsk, fixboot, and fixmbr for limited disk repairs. Once the password has been validated, you have full access to the Recovery Console, but limited access to the hard disk. You can only access the following folders on your computer: drive root, %systemroot% or %windir%

Think while trying to read my ext hdd, it corrupted my system . Now, when I try to boot up my dual boot, I get this message,
"Win2k cannot boot up.\winnt\system32\l_intl.nls is missing or corrupted.
You can repair" how do I go about it after getting to the recovery console. Thanks
