this problem discussed here is because of the NON Bootable Installation Disc. to Install from the CD Rom that is not bootable you can do following ;

Convert your installation CD into Bootable one. to do this, you can use another system where OS is working properly. Open New CD Dialog from Nero. Choose Bootable CD Rom and type the Address of A: in source drive. Now copy all the files and folders from your installation cd to the New Cd Contents. Don't try to change the Order of files. Now burn the disc. this new disc will boot your system without floppies. and install the OS.
