Yeap, I know the existence of resultant set of policy and its tool. But, I wonder whether that mmc snap-in is supported for win2k server. Also, I was looking for either API or textual report from the command-line console. From a few-day research, I figured out that there is an API, which looks very nice and useful. However, the API is only for 2003 or later versions. It seems that the real trouble I have is to deal with win2000.

Thanks for the reply

San
