I wrote a response to this — but, it was tossed by the submit routine.

So, I summarize: NO, the problem still exists.

All I want is the "simple" preview for the JPGs when I click on them (the preview for "htm" files is fine, for example).

I can customize each folder as I go along to get the fancy preview (by taking the path of: View->Customize Folder — but, I have to do that each and every folder.

I guess that I will do that.... eventually I will have all commonly-used folders set up.

Don't waste time on it. Something happened to this system as a result of the Windows Updates two weeks ago.

We move on.....

Thanks again and
Regards,
Dave Shogren

I no longer get a "preview" of a JPG when I single-click on the item when on folder-view. I can go through View->Customize folder and end up with a "fancy" preview (I had never tried that, before....) but when doing so, the Tools->Folder Options does not adhere to the feature and, as a result, I need to customize each and every folder.

Re: No longer getting a "preview" of JPG images when viewing a Fol

Try "Tools | Folder Options | General | Enable Web Content in Folders".

I believe that setting applies to every folder. If not, go to "Tools | Folder Options | View" and turn OFF "Remember each folder's view settings".
