Hi experts:

I have 2 physical internal hard drives:

c: 30GB single partition – operating system

d: 80GB single partition – data

Have ordered a Seagate 320GB.

My plan:

1) copy everything from d: to my usb external & delete all folders/files

2) copy everything from c: to d:

3) shutdown & install the 80GB drive as master (c:) and the new 320GB drive as slave (d:)

Is this doable or will I have to do a clean/reinstall windows etc on the 80GB.

If this plan won't work, I will likely just leave the c: drive as is and replace the d: (80GB) with the new 320GB drive.

Thanks all---

.
