Also don't forget if the job connects to another machine you may need to add the user/ group 'logon as batch job' rights (server side). Control Panel\Admin Tools\Local Security Policy\Local Policies\User Rights Assignments  
"Log on as a batch job"

Thanks to you both. I actually got it to work – feel a bit stupid about this but noticed that I had left the "\$" out of the unc path (duh.) I'll be back if that wasn't the problem (I'll know tomorrow morning as these are scheduled to run overnight.)

Thanks for the feedback. It actually leaves me mystified because I cannot reconcile it with this phrase from your initial post: "When I log onto server A and run the batch file it works; when I use the task scheduler to run the batch it fails."
