I am trying to lock down a user so that the only thing they can use is the icon on their desktop and nothign else.

I have so far been unable to prevent them from accessing a couple of things, and would appreciate any help in locking these down.

The first thing I can still see when I click on the Start button is the Printers And Faxes which allows me to then add a printer and change the properties of the existing ones.

I can also us the My Computer icon, adn although I can't see any drives, from here I can gain access to My Network Places, which allows me to View Network connections. From there I can mess about with the network settings. Is there something I can do that will prevent htis accoutn from even seeing the network connections?

Finally, through the printers and faxes, I can add a scanner using the wizard. Can I close this too?

Cheers

Andrew H
