Not if you disable the property page using a group policy.

If you open your group policy editor, then browse to 'User

Configuration/Admin Templates/Windows Components/Internet Explorer' you will see a setting named 'Disable changing proxy settings'

Enable this policy and your users are stuck with what you give them. Use permissions to filter the users that this is applied to.

> *As for IPSec, it will work but then it will be for everyone.*

That's sort of correct. It will be for everyone who logs into the computers you specify to have the policy applied. You can filter which computers will have the restrictions by only applying the Read and Apply Group Policy permissions to the computers you want restricted.
