you say there are NO LINKS? Do you really mean that? I assume not.

Do you have ANY block policy inheritance on the OUs?

I am also wondering if the SYSVOL issue is something here? Are you getting ANY FRS problems or events on the DCs? I think we need to 100% verify FRS is working first, then see about the GPOs. If the GPUPDATE is saying that all GPOs are empty... that is troubling. How many DCs?
