Semicolon wont even let me complete command successfully.
gives error and says invalid date specified.

I typed this.

```
net user user /times:monday-sunday;8am-5pm
```

and hit enter. It says invalid day range has been supplied. I changed the ; with a comma and it says command completed successfully. I type net user user and it would give all details saying times allowed monday to sunday, 8 am to 5 pm, ALL FINE. But user will still be able to log in at 5:05 on system clock. He will be able to log in and log off til 5:29 PM. Once its 5:31 PM on system clock, he wont be able to log in.

I am using win 2k pro with SP 4 and machine is updated.
