Hi David

If you only have the computer account in the OU, the User Configuration half of the policy won't apply. If you want the User Configuration portion to apply to the user who is logging in, that user must reside in that OU. Alternatively, don't set User Configuration options in that policy and instead create another policy linked to the OU in which the user resides.

In summary, Computer Configuration only applies to computers and User Configuration to users. The computers or users must be in the OU (or in the OU heirarchy below) to which the GPO is linked for it to apply.

Kind regards
