I am preparing for the MCSE 2000 Security exam (70-214), and one of the exercises I am to do is to Modify User Rights. I run a single domain, and when I open up Active Directory Users and Computers, right click the domain name, click on Properties, and click on the Group Policy tab to access the "Domain Security Group Policy", I am not able to EDIT this policy (EDIT is grayed out). I click on the policy Properties, then the Security tab, and I receive the warning message "You only have permission to view the current security information on Domain Security Group Policy", and when the Security screen comes up all of the user permission boxes and the change options (ADD, REMOVE, APPLY) are grayed out. Authorized entries are: Authenticated Users, Creator Owner, Domain Admins, Enterprise Admins, and System. None of these entries has FULL CONTROL access. I am logged on as Administrator, and I'm a member of the Domain Admin group. Both Domain Admin and System have Read, Write, and Create and Delete All Child Objects permissions, but no Full Control. I've tried various things to try and gain access which would allow me to EDIT this policy, but have not been able to. What can I do to obtain FULL CONTROL for this policy so I can EDIT it. Or am I not supposed to be able to Edit this policy from the Domain Properties area? Should I be doing this from the Security Configuration and Analysis snap-in tool from the MMC?? In the exercise I'm trying to complete, the Microsoft Press book I'm using states to go through the Domain Properties, click the Group Policies tab, then double click the Domain Security Group Policy which would bring up the EDIT screen, which I'm not able to do. Thank you.
