Hi there,

I downloaded the 842933 patch before opening the GPO on the XP SP2 workstation, so I haven't had any of the "The following entry in the [strings] section is too long and has been truncated" errors. But I still have the issue where not all the policies are showing up on the Windows 2000 Server vs. the XP SP2 workstation. Is this a known issue?

I will try Hunter's suggestion on manually importing the ADM files on the Windows 2000 server to see if that updates all the policies on the domain controllers to match the same amount showing on the XP SP2 workstation.

I'll let you know how it goes.

Thanks

d mac
