We don't quite understand it either. I was giving the best description of what has been observed.

With regards to gpresult, it indicates that the correct Policies are beeing applied, but only a handfull of our PCs are performing in the way the Policies dictate.

These Windows Firewall Port exceptions are being delivered via Group Policy to some but not all PCs. The PCs that are receiving the Policy settings are not opening the Ports. They are in the Registry as they should be but when the Port Exceptions are checked within the Firewall settings, none are listed.*
