You could use the "Restricted Groups" policy to add members to a "Restricted Group"

Look in: Computer Config> Windows Settings> Security Settings> Restricted Groups.

If you don't have one of the patches installed (sorry, don't have the number or link off hand), the policy is replacing whatever the computer had for the restricted group members. If you did install the patch, then it is additive. So don't forget to put "Domain Admins" and whatever else you wanted in that policy.
