Make sure the policies you are trying to block are "user configuration". At least some of what you describe is computer configuration I believe. You can not block "computer configuration" policy on a per user basis. If it is indeed user configuration, another thing to try is to configure the GPO with deny permissions for "apply" in the security properties for the group you want to not have the policy apply to. See the link below on filtering of Group Policy. --- Steve

<http://support.microsoft.com/default.aspx?scid=kb:en-us:322176> --- see "how to filter scope".

I have already installed GPMC on a XP machine, but the only thing I can see is that several policies is applied and none is blocked - at least not because of block policy inheritance.*
