

You do not have permission to change your password

You do not have permission to change your password

I am having an issue when passwords are about to expire. This issue goes away once the password is expired though.

User logs in and is prompted that his/hers password is going to expire in xx amount of days. The user tries to change the password but gets the "You do not have permission to change your password" error.

Something in my group policy is causing this issue. I can move the user to a different, less restrictive OU, shut the computer off and log the user in and it will allow them to change the password.

One user complained about this and said that they were not able to change the password until the password had expired and "you must change the password" message came up. So i tested this out on a few other users and the results are the same.

Any suggestions?
