- 

I'm having an instance, where, if I try to change Group Policies, I get the following popup error message:

Security Templates  
Windows cannot update the policies

Some other observations.

Windows 2000 SP4

This happens even if I change the policy on a Domain Controller logged in as an Admin.

When I click ok, and exit the policy, it the entry appears to go into the group policy, but I'm not so sure it's doing it right.

This looks to me to be some sort of permissions thing, but I'm not sure where it's happening, or where the permissions problem is coming from. The Domain admin has rights to the sysvol directory naturally.

Any ideas ?

Chris
