I need to define account policies to make sure that all accounts created locally on Windows NT member servers will follow the security requirements defined by the company.

Two questions?

1 – On a Windows NT Domain, if I define domain account policies, will it be the local account policies on NT member servers?

2 – If the answer to the question above is negative, is it possible define local account policies on NT member servers thru System Policy Editor? How?

Thanks!

Felipe
