

Adding multiple OU's in AD tree.

I work for a county school system and have been asked to go through our AD domain and find all containers labeled "computer", and add three sub containers underneath. (Administration, teacher, student.) This is a rather large task being that there are roughly sixty school containers, and nearly one hundred departments, each having a "computers" OU.

My question is this. Is there a script that I could modify, or an app that would automate the process? I am not great with scripting, but can take a decent example and modify to fit my needs if one exists.

Thank you in advance for your help,
Gary
