Hi,

That was the problem, Authenticated users lacked read permissions on the OU where the user object is.

Thanks for your help Mike

Kind Regards,
Uffe

Hello,

I checked the userenv.log file and found "GetUserNameEx failed with 1317".
This message means that the user can't be determined and apply GPOs.
This may be caused the Authenticated Users group having no permissions on
the container including users and computers, please check the domain, OU,
computers, make sure that Authenticated Users group has read permission.

Thanks & Regards,

Mike Luo
