Hello Robert,

Will you read the policy settings from your domain? Take a XP workstation or 2003 server install GPMC and you can read all your policies.

Best regards

Myweb

Disclaimer: This posting is provided "AS IS" with no warranties, and confers no rights.

For XP and Windows 2003 GPRresult gives me a section for Account Policies and Security Options. This allows me to grab into a text file values like MinimumPasswordLength, etc. However, this information seems to be missing from the W2K GPRresult output. Does anyone have any good ideas for grabbing the information that the XP or 2003 GPRresult output with 2000? Another command line tool perhaps or a patched GPRresult for W2K?

Thanks in advance,

R.
