Hi,

myrddinbach schrieb:

1. Windows 2003 domain
2. Windows 2000 TS server (for simplicity we'll call him TS-Server)
3. TS-Server is in TSOU
4. Created a Global group TS-Users which consists of users from various OU's
5. Created and linked a Group Policy object in TSOU
 - a. This policy has loopback enabled set to "Replace"
 - b. This policy has User Configuration/Windows Components/Terminal Services/Start a program on Connection enabled and set to run a specific program
 - c. Under security filter I added the computer account and the TS-Users Global group

Hm, looks perfect to me.

What happens if you enable something different, like "NO desktop Icons"
Did you run a gpresult.exe? Is the GPO in the list?

Mark
