Thanks for advice but I have still problem with SUS.

I m showing you step by step how I instaled SUS.

1. I instaleed Windows 2000 Server as member server
2. I joined server computer to domain NT
3. I installed on server lock-down tool right after installed SUS and patch
4. On the workstation Windows XP I configured SUS via registry like below

[HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WindowsUpdate]

"WUServer"="http://server_name"

"WUStatusServer"="http://server_name"

[HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WindowsUpdate\AU]

"WUServer"="http:// server_name"

"WUStatusServer"="http://server_name "

"RescheduleWaitTime"=dword:00000005

"NoAutoRebootWithLoggedOnUsers"=dword:00000000

"NoAutoUpdate"=dword:00000000

"AUOptions"=dword:00000003

"ScheduledInstallDay"=dword:00000000

"ScheduledInstallTime"=dword:00000009

"UseWUServer"=dword:00000001

After 24 hours on Windows XP, " install dialog " box appeared and I installed patches, but this situation did not repeat. I have on SUS server new approved update but I can not install them on workstation. Where is problem.
