Make a shortcut to the folder (right click).

Add the shortcut to the Start\Programs\Startup menu, either directly or by opening the Explorer in that area (right click on Start button) and doing it as a direct file manipulation.

Items in the Startup group open automatically, including "folders". The menu system is merely subdirectories and shortcuts to subdirectories and files. (It's all smoke and mirrors. <grin>)

Any old Unix guy will figure it out very quickly or can just ask for clarification.

Note: If it is a Network location, you will first need to create the connection so that you will have something to "click on" to add the shortcut.

(I don't usually like to see such folders open automatically but that is what you requested.)
