

Using 2000 as a firewall for other computers

Sorry for those of you who have read this in another forum. Here's the deal. We are trying to implement a kind of "poor man's firewall." My question is how easy is it to place two NIC cards into a Windows 2000 machine (one card having access to the router/ISP, the other having access to a switch) to have a firewall for security purposes. We were wanting to test the security capabilities of Windows 2000 and its firewall. Is this possible? Are there any other cheaper alternatives? Is this even worthwhile? Thanks in advance for any help!
