First, you can't. There's no such thing as an HTTP FTP server. They are two separate protocols entirely. That's like trying to eat your vegetable fruit, or walk your dog cow.

I assume you want to use Internet Explorer to access your FTP server. That requires no configuration on the FTP server side, just enter the URL to the server:

<ftp://ftp.myserver.com/>

Or whatever your FTP host name is. Behind firewalls you may need to deal with passive mode, check an IE group or the FTP group for configuring that if you need it.
