Sure you can connect the hubs. If you connect uplink to uplink, it may not work. many hubs have a switch to make the uplink port as standard by reversing the wires.

> *Hi all....can anyone answer this question for me? I am currently using a Netgear FR114P router/firewall/print server for my home network.....inow that all the ethernet ports are used, I find that I need, at least, a couple more ports from time to time....and I do want to add a network accessable disk drive. But I don't want to go out and buy ANOTHER router...(I already have a couple of the unpowered "dumb" hubs and a new US Robotics 4 port router that I am not currently using).... Can I use one of those hubs and connect the UPLINKS on each hub and get a few more ports or should I bite the bullet and buy a new router/hub with more ports?*
