Yes, right click My Computer and select Properties. Click the Advanced tab and under User Profiles click the Settings button. Highlight your old profile and click the Copy to button. Navigate to the new profile. Be sure to click the Change button under Permitted to use.

Note, if your old user account was a member of the local Administrators group, that does not mean that your new domain account will also be a member. Only domain administrators group members are automatically added to the local Administrators group. You can add your domain user account to the local Administrators group by logging on as a domain administrator and using the Computer Management console.
