Maybe no? I just learned from someone else today that Computer Configuration group policy has an option under Administrative Templates-System-Gourp Policy to Enable "Replace" or "Merge" for "User Gorup Policy loopback processing mode".

You can configure the User Configuration for an OU that contains only Computer Objects. If the above is set to Merge, then when a user logs into one of the machines in your Computer OU, their own User OU GPO is applied and then the Computer OU GPO's User Configuration is also applied.

Setting to replace means that the Computer OU GPO's User Configuration overrides the user's native OU's GPO.

Wow, that sounds really complex.
