I have installed Win2K Prof on a HP Pavillion PC. Everything works fine except Modem is unable to recognize. In the device properties listing there is a small yellow exclamation on PCI controller. I opened the PC and could not identify the modem type or manufacturer. Then I have erased the OS and installed a XP home edition. That recognised it as Lucent Win Modem. I have erased the OS again and installed Win2K Prof (It is a requirement that this PC should have Win2K). I downloaded the Lucent Win Modem (v822) from internet on another PC and tried to apply these driver. The system says it is not a matching driver. Even if I force to install these drivers the modem is not operational. (Unable to Start). Any suggestions, please?
