Hi

I have a vpn connection from home (w2k pro) to the office (w2k pro).

Can I limit the permission of the shared folder at the office to me only or the permissions to read should be set to everyone? It seems that I can't access to the folder from home even if I logged on as my name and password similar to the office.

I would like to keep the permissions to only me. How would I configure the settings? Do I need to encrypt the folders before I copy to the pc at home?

Many thanks in advance.

Richard

We need more information.

- 1) Your computer at home connects and authenticates and the VPN is established?
- 2) How does your home computer get it's IP address on the VPN interface?
- 3) Where is the share located (on the W2K computer that is the VPN server or on another computer on the work LAN)?
- 4) How are you trying to access the share (by computer name, IP Address, Browser)?
- 5) What error do you get when your attempt fails?
- 6) Please post the output of an "ipconfig /all" with the VPN connected.
