I am using Incredimail and on certain e-mails I get a script error notice one of which said - isminte4 is unidentified. It has only happened on one persons messages.

I obviously am new to 2000 and I am so confused about this program it is driving me crazy. I am getting multiple files between administrator and dell. ie I now have 3201 files and 721 folders under adminis. and 2853 files and 873 folders under dell. I have screwed something up drastically and PLEASE if someone can help or lead me in the right direction you will keep me from going insane! I want to get XP, but, again, have no idea how to keep files I need from 2000.

I am in a bit of a mess as you can see.

I am grateful for any help. Joanne
