| Hello,

| Does anyone know how I may get the Internet Information
| Service (IIS)?

| My pre-loaded Windows 2000 does not have it and I need it
| to create, test and run ASP 3.0 pages offline.

| Can you help?

| Thanks,
| *Gouaf

Gouaf -

If you go into your control panel, then to Add/Remove Programs, click on Add/Remove Windows Components. In the list, you should see Internet Information Services. Check the checkbox, and click Next, and you IIS will be installed. You'll need your Win2k CD in the drive, unless your installation files are on the hard drive.

Hope this helps,

Derek Wirch, MCSE+I (NT 4.0), MCP (Win2k)
Microsoft Exchange Support Engineer

Email: a-derekw@microsoft.com

Please respond in the group, so all users may benefit.

Even if you're on the right track, you'll get run over if you just sit there.

SECURITY ANNOUNCEMENT:

Please subscribe to the FREE Microsoft® Security Notification Service on <http://register.microsoft.com/subscription/subscribeme.asp?ID=135> an e-mail alert service geared toward IT professionals. We use this service to notify subscribers when we release an important security bulletin or virus alert, and also to make them aware that they might need to take action to guard against a circulating threat. You should also bookmark Microsoft Security Bulletin's page available at <http://www.microsoft.com/technet/treeview/?url=/technet/security/bulletin/> to view all our bulletins. To insure you are current with all security patches visit Windows Update at <http://windowsupdate.microsoft.com> to install patches. Running the SCAN program from the Windows Update site will keep you up-to-date.
