Actually I'm not sure what my problem is really is.

First off, I'm not real computer literate. My son did some clean up of my desktop and startup for me one day which may or may not have anything to do with this problem.

I am an administrator /moderator of a website. Recently, I can not view any pictures posted on this website where I could before. I can see all the text the background and the messageboard postings just no pictures and we have a lot of pictures posted there. Being an admin is kind of hard when I cannot help with maintenance of changeing pictures or posting new when I can not see them. I see either a blank space where the picture would be or when I try to view an album, a list of the jpgs

example :

page 1 of 16

microsoft.public.win2000.new_user: veiwing pictures

It should not look like this.

Clicking on the individual links does nothing either. Although everyone else can click one of these and see it I can not

I do not have this problem with any other site I visit.

Along with win 2000, I have zone alarm and popup manager

Can anyone out there help me?

Thanks for your time,

Buzz
