| Hi all experts,

|

| I managed to set up the ftp using IIS (internet
| information service). From my machine(server name), i can
| see the below

- | 1. Default FTP site
- | 2. ftp.myit.com (created by me)
- | 3. default Web site

|

| My question is how do i know is the site works? I was
| unable to connect to this site by typing the ftp.myit.com.
| I can access it by typing the IP address. I asked one of
| my friend connect (over the internet) to this site using
| the IP address I given, but he was unable to access. Do I
| configured wrongly?

|

| Can anyone please enlighten me?
