I just did an upgrade to Windows 2000. I was able to easily install because I made the 4 bootdisks. But new computers don't have floppy drives. How do we install when that is the case, pls, anyone know? I hope to get a new computer in a couple of months and both Win98SE and Win2K seem to create boot disks for the CD-ROM to work, etc. and would like to use Win2K in new system. If anyone can point me to a good guide online, would greatly appreciate it! :oD
