How would one go about running a "Machine Startup Script"?

Oh, and Dave, that Resource Kit you linked to gave an error:  
"This product requires Windows XP or a later version to have been installed".

I want to launch a program before a user logs into Windows. I have the Resource kit but unfortunately not the AutoexNT whatchamacallit. Is there any way I can do this? I also want the program's UI to be visible, if not before logging in then at least afterwards.

Doesn't running a Machine Startup Script work?
