I found a number of keys in the registry that identify the system as being an upgrade:

```
HKLM\Software\Microsoft\Windows  
NT\CurrentVersion\Winlogon\PrevOSVersion\PlatformName = "Windows 98"
```

```
HKLM\Software\Microsoft\Windows\CurrentVersion\Setup\Win9xUpg
```

I've not yet been courageous enough to delete those keys.

I did delete the following with no ill effect:

```
[HKEY_USERS\DEFAULT\Software\Microsoft\Windows\CurrentVersion\Runonce]"Printing Migration"="rundll32.exe  
C:\\WINDOWS\\System32\\spool\\migrate.dll,ProcessWin9xNetworkPrinters"
```

Somehow, the Lexmark installation code is being deceived into believing the system is Win 9x.

Seems to have something to do with the bidirectional drivers.
