Thanks for your reply.

Yes, I did check that. If that was not set correctly, the task wouldn't run at all.

This is a monitoring task that runs every 10 minutes around the clock. It has worked fine for up to 6 hours, then fails. Once it fails, it does not succeed again until I intervene and reset the password.

I've seen Microsoft Knowledge Base article 811155 which describes this event log

error as it relates to starting service. It does not talk about scheduled tasks failing, however I have a feeling the cause may be the same.

Howard
