Hi Andywest,

Thank you for posting!

Have you tried to run the Component Checker from the run line with the /d switch? The component checker will ask where the redistributable download is located. Browse to the location and the component checker will proceed to uninstall mdac and install the version you specified. Also when you use the /NR switch along with the /d switch it will not install what ever mdac version you have downloaded but leave without mdac.

For additional information about Component Checker, visit the below KB article

307255 INFO: Component Checker: Diagnose Problems and Reconfigure MDAC
<http://support.microsoft.com/?id=307255>

I hope that this can help you to remove MDAC completely.

Have a nice day!

Thanks & Regards,

Feng Mao [MSFT], MCSE

| Hi

|
| I have tried to do a Rollback from MDAC 2.8 to 2.7 on a
| W2K Server.
| I found a KB article with a script called "unmigrt".
| This script deregistered all the files correctly and after
| that i was able to install MDAC 2.7.
| Component Checker 2.0 identifies MDAC 2.7 SP1 Refresh
| installed on the machine.
| Sounds good so far but the registry still says that MDAC
