Do you know if there was a security template or anything locking down the system applied?

You can run security configuration and analysis to determine the current system security settings, and reset any default settings that have been changed by using this tool as well:

<http://support.microsoft.com/?id=266118>

It appears this is most likely some type of permission problem on the machine, if you have another terminal server that works compare permissions on the two and see if that makes a difference.

Thank you!

Aimme Lirette
