|| Environment

||

|| Servers Win2k

|| PC's Win2k

|| Thinclients wince (using a win2k terminal server)

||

|| Problem

||

|| Management wants the Thinclient users to use a desktop faxing
|| application (any desktop faxing application). So i attached a
|| external USRobotics 56K modem (serial) to the terminal server.
|| Configured the Microsoft fax component of Office 2k pro SR1, (when
|| installed everything from disc 1 was configured to run from the
|| local machine) with my user profile (Domain Admin) and it worked as
|| it should. Now this is where it gets tricky, I followed the same
|| steps for the general (users) accounts and office looks like it is
|| printing to the fax printer (modem), the printer icon disappears
|| indicating that the document left que, However the Terminal server
|| never sends the fax. (Modemn dosent initalize, no fax recieved by
|| the regular paper fax machine).

||

|| So now on to my question.

|| Does anyone know of either 2 things; (1) How to properly configure
|| MS fax on a terminal server so that a general user (non domain
|| admin). or (2) a fax application that works on a terminal server so
|| that term serv users can fax using a external serial modem?

||

||

||

|| Thanks

|| Carl

you can read this two article, I think they will help you ...
