I still believe that there **is** a policy affecting the server. You won't find it in the security policy, but in the path I wrote in my first post.

Have you checked domain wide GPOs? Sounds as if there is a domain wide GPO, which affects all computers and all users, except Domain Admins.

Check Resultant Set of Policies to find out.

You could also check the registry setting directly:

HKLM\Software\Microsoft\Windows NT\CurrentVersion\winlogon
DeleteRoamingCache=0 will keep the cached copy
REG_DWORD value
