Right click causes an error and crashes Explorer.exe after installing Windows XP SP2?:

After I installed the SP2, and everything works fine for like a while. After I restart my PC, then the performance got a little slow which I don't really mind. But the real problem that is every time I Right-Click on a file like pictures file or movies or any other files. Then it crashes and DrWatson came out and said some error. Then I click close and it restarts the Explorer.exe. It happens like that every time I Right click.

It comes out like this:

```
EventType : BEX      P1 : drwtsn32.exe      P2 :  
5.1.2600.0      P3 : 3b7d84a2  
P4 : dbghelp.dll      P5 : 5.1.2600.2180      P6 :  
4110969a      P7 : 0001295d  
P8 : c0000409      P9 : 00000000
```
