Hello,

I have a computer that has a virus on it and after a while showed me at the startup "Stop C0000218 The registry cannot load Hive(file)" So I put the Harddrive in another Computer cleaned up the viruses and tried to make a backup of the drive. When I came to the Documents & Settings Folder it said "access denied". Is there a way to access it for example that I can define with wich Username and Password I want to open it like a Network Connection?

Any Help would be appreciated.

Thanks

.
