"Run as", adobe flash & shockwave players dont give that option, it self installs from thier web site, no downloads.. Also, before you retry, delete cookies, files, in internet options. Also, open advanced, view objects, you'll probably find it, delete before you retry.

OK, try this one: I have tried installing this software left, right, up, down and safe mode and no matter what, I get the same error message: "you do not have access to make the required system configuration modifications. Please rerun this installation from an administrator's account." Well, I have. Over and over. Tried the built-in admin account - nada. I am listed as a system administrator, and it don't work there either. Even tried the "run as..." option...zip, zilch. So what's the sitch? Is there something that needs to be turned on? Or what? Tried the ctl-alt-del bit too, didn't work. What am I missing? Using WinXP Pro, SP2.
